AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

Claim 1 (Currently Amended): ~~A data storage device in a form factor assembly not greater than three and one half inches comprising:~~

a data disc rotatably mounted on a baseplate;

~~an actuator arm adjacent to the data disc carrying a transducer for reading data from and writing data to the data disc;~~

a printed circuit board (PCB) fastened to the baseplate having a servo controller in operable communication with the actuator arm for moving the actuator arm over the data disc; and

a central processing unit (CPU) mounted to the PCB generating control signals to the servo controller and running an operating system; and
~~memory storing an application program operably connected to the CPU, whereby the application program is run by the CPU.~~

Claim 2 (Currently Amended): The data storage device of claim 1 wherein the data storage device is connected to a communications network, further comprising:

an input/output module communicating to a node connected to the communications network.

Claim 3 (Currently Amended): The data storage device of claim 2 wherein the input/output module includes a network interface module operable to communicate to a node on the network using a hypertext transport protocol.

Application Number 09/938,144
Responsive to Office Action mailed March 1, 2006

Claim 4 (Currently Amended): The ~~data storage~~ device of claim 3 wherein the input/output module further includes a video interface module operable to drive a video monitor via the communications network.

Claim 5 (Currently Amended): The ~~data storage~~ device of claim 4 wherein the ~~data storage~~ device is a three and one half inch form factor assembly.

Claim 6 (Currently Amended): The ~~data storage~~ device of claim 5 further comprising a file system managing file data stored on the data disc, wherein the file system is in direct communication with the servo controller.

Claims 7-15 (Canceled).

Claim 16 (Currently Amended): A ~~data storage device having a three and one half inch form factor or less, the storage device~~ comprising:

~~a data disc rotatably mounted on a baseplate;~~

~~an actuator arm adjacent to the data disc carrying a transducer for reading data from and writing data to the data disc;~~

~~a printed circuit board (PCB); within the form factor fastened to the baseplate, the PCB having a servo controller mounted thereon in operable communication with the actuator arm for moving the actuator arm over the data disc;~~

~~_____ a central processing unit (CPU) mounted on the PCB and running an operating system; mounted thereon generating control signals to the servo controller; and~~

~~_____ a memory mounted on the PCB thereon storing an application program operably connected to the CPU, wherein the application program is run by the operating system running in the CPU.~~

Claim 17 (Previously Presented): The device according to claim 16 wherein the memory stores both the operating system and the application program for use by the CPU.

Application Number 09/938,144
Responsive to Office Action mailed March 1, 2006

Claim 18 (Currently Amended): An intelligent storage element comprising:
a case forming a substantially sealed environment;
a data disc mounted within the case, ~~wherein the data disc rotates about a central axis;~~
~~an actuator arm carrying a head to read and write data to the data disc;~~
a central processing unit mounted within the case; and
a memory mounted within the case, wherein the memory stores an operating system, and
the central processing unit runs the operating system.

Claim 19 (Previously Presented): The intelligent storage element of claim 18, wherein the data disc is a magnetic data storage media.

Claim 20 (Previously Presented): The intelligent storage element of claim 18, further comprising a network interface module, wherein the network interface module allows the intelligent storage element to communicate across a network.

Claim 21 (Previously Presented): The intelligent storage element of claim 20, wherein the network is a local area network.

Claim 22 (Previously Presented): The intelligent storage element of claim 18, wherein the case comprises a base and a top cover.

Claim 23 (Previously Presented): The intelligent storage element of claim 18, wherein the operating system runs application software stored on the data disc.

Claim 24 (New): The intelligent storage element of claim 18, wherein the memory is random access memory.

Claim 25 (New): The device of claim 1, further comprising:
a head that reads data from the data disc to produce a signal; and
a channel mounted to the PCB, wherein the channel receives the signal from the head.

Application Number 09/938,144
Responsive to Office Action mailed March 1, 2006

Claim 26 (New): The device of claim 1, wherein the CPU generates control signals to the servo controller.

Claim 27 (New): The device of claim 1, wherein the data disc stores an application program run by the operating system.

Claim 28 (New): The device of claim 16, wherein the operating system is a Linux operating system.
